About

I'm a Back End developer with industry experience of more than three years building websites and web applications. I specialize in PHP and have experience working with Cross-Platform technologies . I also have professional experience working with PHP frameworks (Laravel) .

Now I seek self-development continuously because of the rapid development that takes place in the technical world around us.

I am always looking to know the problems that hinder the business and affect its growth in an effort to provide more easy technical solutions and provide the best possible solutions by linking business with technology to achieve the best possible results.
